

Custom Cable Assemblies

C-901 UAV Cable

AP-176 connector

MC-238-7 connector

Features

- Suitable for audio-fill applications
- Built for high-altitude applications (UAV and satellite capable)
- Dual connector design:
 1. AP-176 threaded connector
 2. MC-238-7 for bulkhead mounting

Overview

The C-901 audio-fill connector was designed specifically for a UAV application connecting a radio to a panel door where the dual threaded connector attaches to the door on one side and provides a threaded connectivity outside the panel itself.

The C-901 is just one example of the many custom-engineered cables that are being designed and manufactured by the AMTI operation of Ultralife Communications Systems.

Other Connectivity Solutions

When you have a need to get connected and stay connected, whether a standard design or custom configuration, we can provide the engineering, design and manufacturing reliability for which AMTI is known. Whether on-the-ground or high above the earth, our areas of expertise include, but are not limited to, the following applications:

- radio remote control
- radio programming
- high-speed data controllers
- GPS connectivity
- specialized audio accessories

Ultralife: much more than a battery company. From the individual soldier to command and control, from manpack kits to vehicle integration, we are your one source for many solutions.
